BLÜCHER® Plug & Play Penetration

Installation without welding

NO MORE WELDING!

BLÜCHER has developed an entirely new solution for installing flanged BLÜCHER® EuroPipe penetrations in steel structures. It is fixed by means of a screw solution.

HOW IT WORKS

- The oval-shaped flange is passed through the round hole.
- The oval-shaped flange has a larger diameter (major axis) than the cut-out hole. This is to fix and secure the penetration.
- The penetration is centered in the hole by means of the gasket, and the 4 screws are tightened - first with a cordless screwdriver and then with a torque wrench to the right torque.

All this is done in less than 60 seconds.

As simple as that ...

BLÜCHER's mission is to offer our customers a penetration which is:

- Quick and easy to install - fast and simple
- Fully approved and tested: Fire test A0-A60 - Vibration test - Tightness test
- Perfect solution for panel line production
- No skilled workers required
- Installation at a late stage of the project
- For all your projects: New build and refit
- For decks 4 - 15 mm thickness

PLUG & PLAY PENETRATION TYPE 868.910

Order Code	D		D2		H		X
